

Installation Notes

Installing the 1x1 Video Amplifier

The 1x1 Video Amplifier is designed to amplify video signals and distribute them, when coupled with a passive video distribution module, to TVs throughout the home.

Follow these instructions for easy installation:

1. Snap the 1x1 Video Amplifier into any single Module space.
2. Plug the power patch cord for the video amplifier into the DC power port on the module. Connect the incoming service line to the "CATV//ANT" port on the amplifier.
3. Connect a coaxial cable from the "External" port on the 1x1 module to the "CATV//ANT" port on a 1x8 or 1x4 passive video module (sold separately) to distribute the signal throughout the home.
